Education

Bachelor of Engineering in Computer Science and Engineering

Universal College of Engineering, Vasai, Maharashtra

CGPA: 7.1

Experience

Educator — Get AnalyticX

Jan – July 2025

- Trained 1,000+ students on AI tools, Power BI, and data analytics, enabling direct application of industry-relevant skills.
- Taught prompt engineering and practical AI usage, helping students cut manual workload and improve output quality through human-AI collaboration.
- Delivered ML and automation demos that bridged the gap between theoretical concepts and real business application.

Technical Skills

Languages: C++, Python, C#, JavaScript, HTML, CSS

Databases: MySQL, SQL, PostgreSQL, SQLite

Frameworks & Libraries: Django, TensorFlow, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, Seaborn

Tools & Platforms: Git, GitHub, AWS, Docker, Power BI, Excel, Vercel, Machine Learning, NLP

Projects

AI Autofill Chrome Extension

GitHub

- Built an AI-driven form detection engine in JavaScript, enabling auto-identification of input fields and eliminating manual form analysis.
- Integrated intelligent input suggestions at the browser layer, cutting repetitive data entry time and boosting productivity across multi-step forms.
- Designed a reload-free extension architecture ensuring seamless autofill with zero disruption to the browsing workflow.

Inventory Optimization (SQL Analytics Project)

GitHub

- Wrote complex SQL queries with multi-table joins to surface stock inefficiencies, enabling businesses to cut overstock costs and avoid supply shortages.
- Built a reorder optimization model on historical data, allowing procurement teams to make data-driven decisions and reduce emergency purchases.
- Developed demand forecasting analysis that improved inventory turnover and reduced dead stock accumulation.

VibeTix – Full Stack Ticket Booking Platform

GitHub

- Engineered a real-time booking flow using Django and SQL, reducing friction and enabling seamless end-to-end transactions.
- Built dynamic event listing and seat availability features, letting organizers manage events independently and improving scalability.
- Designed normalized database models for users, events, and bookings, ensuring data integrity under high-concurrency ticket purchases.

Air Buddy – Smart Air Quality Monitoring Platform

GitHub

- Built an ML-powered AQI prediction module that enables proactive pollution alerts, giving users advance warning before hazardous conditions occur.
- Developed an OCR-based challan verification system that automated document data extraction, eliminating manual entry and reducing processing errors.
- Designed real-time AQI dashboards that helped authorities and citizens make informed decisions during high-pollution events.
- Architected scalable Django backend services for continuous sensor data ingestion, ensuring platform uptime without performance degradation.

Achievements

- Secured **1st Prize** in Web Development at Technova Hackathon.
- Served as **Technical Head** at HackcathonicX Hackathon, leading technical evaluations and mentoring participants.
- Qualified for **Smart India Hackathon 2024 and 2025**.
